Overview

Here's an overview of the project. Commissioned by Day Trading Inc, blah blah blah.

Architecture

1.1 Original architecture

Can steal most of this from the first report.

- 1.2 Technology
- 1.2.1 Golang
- 1.2.2 RabbitMQ
- 1.2.3 Redis
- 1.2.4 Postgres
- 1.2.5 Websockets
- 1.3 Work plan
- 1.3.1 Timeline
- 1.4 Final architecture
- 1.4.1 Worker
- 1.4.2 Quote manager
- 1.4.3 Audit logger
- 1.4.4 AutoTX manager
- 1.4.5 Load balancer
- 1.4.6 Frontend
- 1.4.7 Docker

Security

lol. just lol.

Test plan

3.1 User testing

Validate command pre/post conditions. Tested through FE?

Fault tolerance

Performance analysis

- 5.1 Decreasing quote retrieval time
- 5.1.1 Statistical analysis of legacy quote server
- 5.1.2 Using timeouts to ensure fast quote retrieval
- 5.1.3 Timeout effectiveness
- 5.2 Worker scaling
- 5.2.1 The sixty second golden window
- 5.2.2 Scaling results
- 5.3 Command execution time analysis

Capacity planning

- 6.1 Logging throughput
- 6.1.1 Limits of logging to a flat file
- 6.1.2 Logging directly to an RDBMS
- 6.1.3 Processing logs with ELK
- 6.1.4 Buffered logging
- 6.2 Worker loading
- 6.3 Quote server scaling
- 6.3.1 Building a "snoopy" quote server
- 6.3.2 Performance analysis

Appendix A My appendix

Here is some text for my appendix.
